

The Risks and Benefits of ChatGPT and Artificial Intelligence

Mark McCreary, CIPP/US, CIPT

Don't Stop Listening Just Because this is Exciting Stuff!

- We will discuss how you can use AI tools in your practice
- That use has very specific guardrails around it
- These AI tools, and the guidance and rules around, will be fluid for some time

Artificial Intelligence

"The development of AI is as fundamental as the creation of the microprocessor, the personal computer, the internet, and the mobile phone. It will change the way people work, learn, travel, get healthcare, and communicate with each other. Entire industries will reorient around it. Businesses will distinguish themselves by how well they use it."

-Bill Gates, Co-Founder of Microsoft

What are Artificial Intelligence Tools?

- Artificial intelligence (AI) is intelligence—perceiving, synthesizing, and inferring information—demonstrated by machines, as opposed to intelligence displayed by nonhuman animals and humans
- Example tasks in which this is done include speech recognition, computer vision, translation between (natural) languages, as well as other mappings of inputs

What are Artificial Intelligence Tools? (Everyday World)

- Al applications include
 - advanced web search engines (e.g., Google Search)
 - recommendation systems (used by YouTube, Amazon and Netflix)
 - understanding human speech (such as Siri and Alexa)
 - text auto-complete on your smartphone
 - self-driving cars (e.g., Waymo)
 - automated decision-making and competing at the highest level in strategic game systems

What are Artificial Intelligence Tools? (Legal Industry)

- E-discovery tools such as review of documents for discoverable or otherwise relevant information
- Al-powered legal research software
- contract and legal document analysis
- proofreading, error correction and document organization

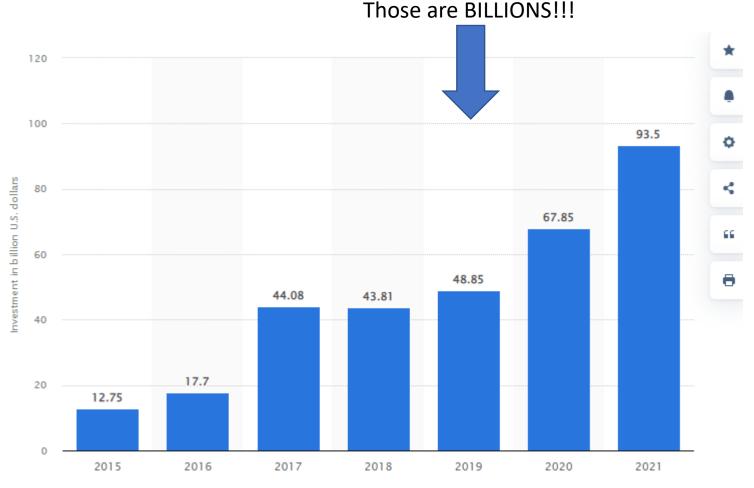

What are Artificial Intelligence Tools? (Chatbots)

- Brings us to chatbots like OpenAl ChatGPT
- It is hard to overstate this moment
- This is a disruptor like:
 - Email
 - Social Media
 - Mass adoption of the Internet
 - think just how fast that happened
 - think about industries it destroyed (travel agencies, music industry, video rentals)
 - Smartphones what has really changed since then?

Where are We with Al Tool

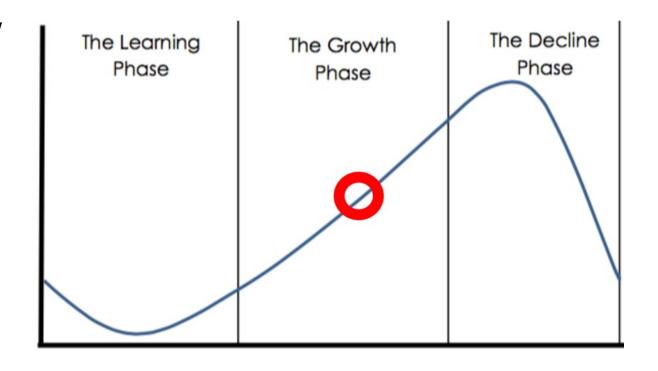

Development

- Investment in AI continues to explode
- Microsoft backed OpenAI in July 2019 with \$1B and Azure was exclusive cloud provider
- Microsoft invested another \$10B in January 2023

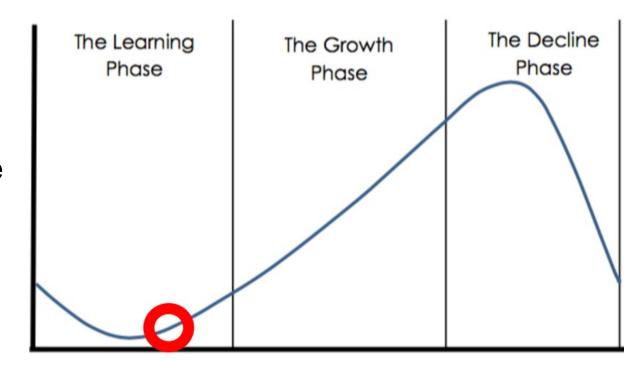

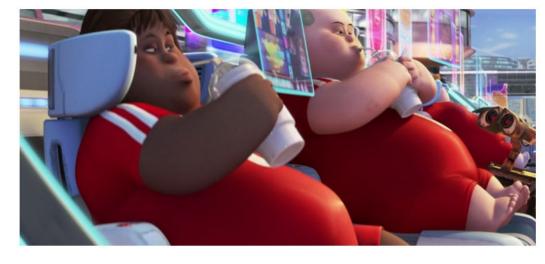

- Technologies generally follow a Sigmoid Curve
- Are we in the middle, and some interesting new technologies will emerge?
- Suddenly Siri is worthwhile, and Bing is a thing? We have easier/different search now?

- Are we at the beginning, and the industries disrupted and changes to daily life are unknowable?
 - Is this receiving sending mobile email (BlackBerry)?
 - Is this selling books on the Internet (Amazon)?
 - Is this downloading free music (Napster)?
 - Is this the flashlight app on your iPhone?

- The truth is we have no idea where we are with AI tool development
- The one thing everyone agrees on is that everything is about to change
- People 40 years old or younger grew up immersed with the Internet and related technologies
 - Everything they know will be transformed in some way or many ways

- What is different this time is we are aware of what is happening
- It may be unknowable, but we are all witnesses
- We all have control over how these new technologies and applications will be used
- We are sitting here today, hearing about the benefits and risks, we have foundational knowledge of threats from existing technologies – we have choices going forward, eyes wide open

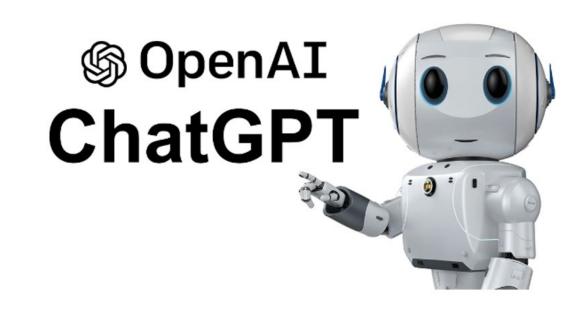

ChatGPT

- Let's answer the first question people have
 - Chat Generative Pre-trained Transformer
- A chatbot developed by OpenAI, launched in November 2022
- Has been fine-tuned using both supervised and reinforcement learning techniques (both by humans)
 - Supervised learning the model was provided with conversations in which the trainers played both sides: the user and the AI assistant
 - Reinforcement learning step, human trainers first ranked responses that the model had created in a previous conversation

ChatGPT

- Boiled down, this technology is just a thing that predicts what the next word will be
- But that is NOT what it feels like when using ChatGPT
- It "talks" and interacts like a human very convincingly

ChatGPT

- 3.5 years for Netflix to get 1M subscribers
- 2 years for Twitter to ger 1M users
- ChatGPT took 5 days

ChatGPT Sprints to One Million Users

Time it took for selected online services to reach one million users

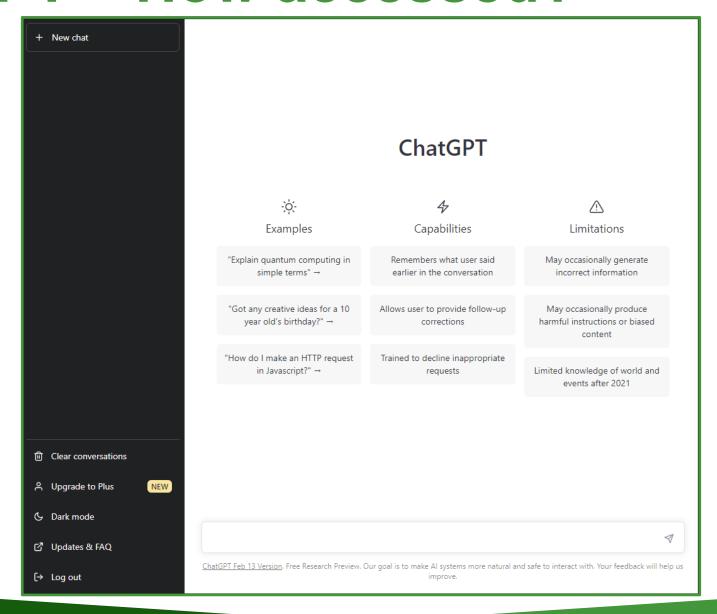

^{*} one million backers ** one million nights booked *** one million downloads Source: Company announcements via Business Insider/Linkedin

ChatGPT – What Kind of Queries

ChatGPT – What Kind of Queries

Is common law marriage recognized in Pennsylvania?

Is common law marriage recognized in Pennsylvania

No, Pennsylvania does not recognize common law marriage. Common law marriage is a type of informal marriage that is created by the agreement and behavior of two individuals without a formal ceremony or license. While some states recognize common law marriage, Pennsylvania does not.

In Pennsylvania, a valid marriage requires a marriage license and a ceremony performed by an authorized officiant. Couples who live together in Pennsylvania without being formally married are not considered to be married under Pennsylvania law, regardless of how long they have lived together or how committed their relationship is. However, Pennsylvania recognizes common law marriages that were established in other states that do recognize them.

It's worth noting that even if a couple is not considered to be married under Pennsylvania law, they may still have legal rights and obligations with respect to each other, such as property rights or the right to receive support in the event of a separation.

Write a demand letter to Tom Paradise that he pays me no later than Friday the \$50 that I loaned him on **January 3, 2023**

Write a demand letter to Tom Paradise at 123 Fake Street in Margate, New Jersey that he pays me no later than Friday the \$50 that I loaned him on January 3, 2023

Dear Tom Paradise,

I am writing to demand immediate payment of the \$50 that you owe me. As you are aware, on January 3, 2023, I loaned you \$50 to help you out in a time of need.

Despite repeated attempts to contact you, you have failed to repay the amount you borrowed, which has caused me significant financial hardship. This is unacceptable, and I demand that you pay me the full amount owed no later than Friday, February 24, 2023.

If I do not receive payment by this date, I will have no choice but to pursue legal action to recover the funds owed to me. I hope that it will not come to this and that you will honor your commitment to repay the loan as soon as possible.

Please respond to this letter as soon as possible to confirm that you will make the payment by the deadline specified. If you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

[Your Name]

Write a love letter to my wife Jenni

Dear Jenni,

As I sit down to write this love letter to you, my heart is overflowing with love and gratitude. You are the most important person in my life, and I want to take this opportunity to tell you just how much you mean to me.

Jenni, you are the most beautiful person I know, both inside and out. Your smile lights up my day, and your laughter fills my heart with joy. You have an incredible spirit, a heart full of kindness and compassion, and a determination to make the world a better place. I am in awe of you every day.

I am so grateful for the way you support me, challenge me, and inspire me to be the best version of myself. You are my best friend, my confidante, and my soulmate. I can't imagine going through life without you by my side.

Jenni, you make every day better just by being in it. Your love and devotion have been a constant source of strength and comfort, and I can't thank you enough for all that you do for me and for our family. You are an amazing wife, a wonderful mother, and a true partner in every sense of the word.

I love you more than words can express, and I promise to spend the rest of my life showing you just how much you mean to me. You are the love of my life, Jenni, and I am so grateful for every moment we spend together.

Forever and always,

[Your Name]

ChatGPT – What Kind of Queries

Write a biblical verse in the style of King James bible explaining how to remove a peanut butter sandwich from a VCR

And it came to pass that a man was troubled by a peanut butter sandwich, for it had been placed within his VCR, and he knew not how to remove it.

And he cried out to the Lord, saying, "Oh, Lord, how can I remove this sandwich from my VCR, for it is stuck fast and will not budge?"

And the Lord spoke unto him, saying, "Fear not, my child, for I shall guide thy hand and show thee the way. Take thy butter knife, and carefully insert it between the sandwich and the VCR, and gently pry them apart. And with patience and perseverance, the sandwich shall be removed, and thy VCR shall be saved."

And the man did as the Lord commanded, and lo and behold, the sandwich was removed from the VCR, and the man was saved.

And the Lord said, "Verily I say unto thee, seek not to put thy peanut butter sandwiches in thy VCR, for it is not a suitable place for such things. Rather, keep thy sandwiches in thy refrigerator or on thy plate, where they belong."

And the man heeded the Lord's words, and from that day forth, he kept his sandwiches in their proper place, and was saved from trouble and woe. Amen.

Copyright and Intellectual **Property Issues**

Write a poem in the style of Edgar Allen Poe about clowns

Amidst the shadows of the night

A fearsome figure comes in sight

A jester with a painted face

A haunting presence, full of grace

His eyes, they gleam with fiendish light

As he dances in the pale moon's sight

His twisted smile a crooked grin

That chills the bones and shakes the skin

This clown, a mockery of mirth

A jester of the grimmest worth

He laughs with malice in his heart

And tears your sanity apart

His jests are cruel, his pranks obscene

And yet you cannot help but keen

As he draws you in with wicked glee

And toys with you relentlessly

Beware, my friend, of this dark clown

For once he's got you, you'll be down

In madness and despair and fright

Forever lost in his cold, cold sight.

Google Bard

- Companies are not going to let OpenAl feast alone
- Google is not going to let Microsoft make Bing a thing
- Companies will go too fast, guardrails will be limited, mistakes will be made

Introducing Bard

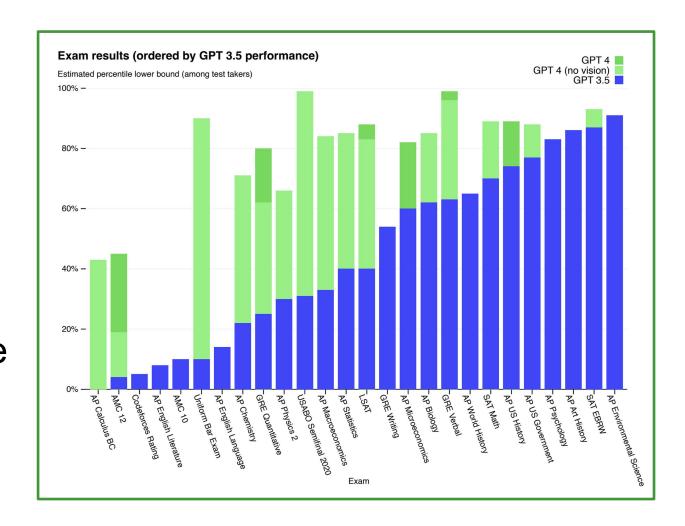

It's a really exciting time to be working on these technologies as we translate deep research and breakthroughs into products that truly help people. That's the journey we've been on with large language models. Two years ago we unveiled next-generation language and conversation capabilities powered by our Language Model for Dialogue Applications (or LaMDA for short).

We've been working on an experimental conversational Al service, powered by LaMDA, that we're calling Bard. And today, we're taking another step forward by opening it up to trusted testers ahead of making it more widely available to the public in the coming weeks.

Bard seeks to combine the breadth of the world's knowledge with the power, intelligence and creativity of our large language models. It draws on information from the web to provide fresh, high-quality responses. Bard can be an outlet for creativity, and a launchpad for curiosity, helping you to explain new discoveries from NASA's James Webb Space Telescope to a 9-year-old, or learn more about the best strikers in football right now, and then get drills to build your skills.

GPT-4

- Released on March 14, 2023
- GPT-4 is a large multimodal model (emphasis on multimodal), it is able to accept both text and image inputs and output human-like text
- The new model is more capable in terms of reliability, creativity, and even intelligence as seen by the higher performance on benchmark exams above

GPT-4

- OpenAl's own technical report is NOT transparent or "open"
- The sole author of the report is listed as the company rather than specific researchers
- "Given both the competitive landscape and the safety implications of large-scale models like GPT-4, this report contains no further details about the architecture (including model size), hardware, training compute, dataset construction, training method."
- Complete 180 from OpenAl's founding principles as a nonprofit, open-source entity

GPT-4

6 Acknowledgements

We are grateful to our expert adversarial testers and red teamers who helped test our models at early stages of development and informed our risk assessments as well as the System Card output. Participation in this red teaming process is not an endorsement of the deployment plans of OpenAI or OpenAIs policies: Steven Basart, Sophie Duba, Cèsar Ferri, Heather Frase, Gavin Hartnett, Jake J.

- Guardrails are being removed in the interest of competition and quick rollouts of products
- GPT-4's own researchers did not endorse its release or Microsoft's deployment plans
- Microsoft fired entire AI ethics team

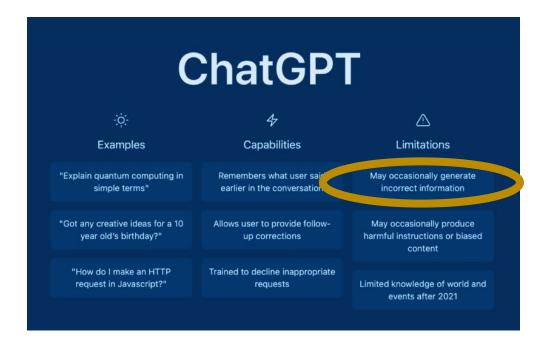

Benefits of Al Tools

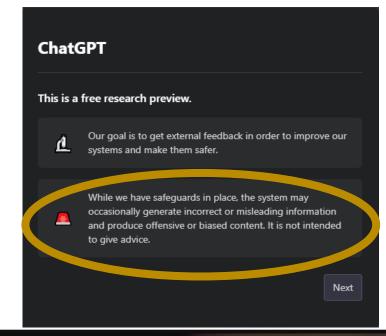

- Quick information
 - Don't have to sift through millions of hits
- Often a great first draft
 - "Draft" is a great description
- Unparalleled knowledge
 - With some limitations
- Free
 - For now
 - ChatGPT already has a paid model

- Improve efficiency
- \$ Save costs
- Avoid problems
- (Anticipate future scenarios
- Reduce human error
- Automate processes

- With ChatGPT, data cut-off in 2021
 - Does not have the most recent data
 - This will change, but will come at a huge cost
- Often wrong but overly confident

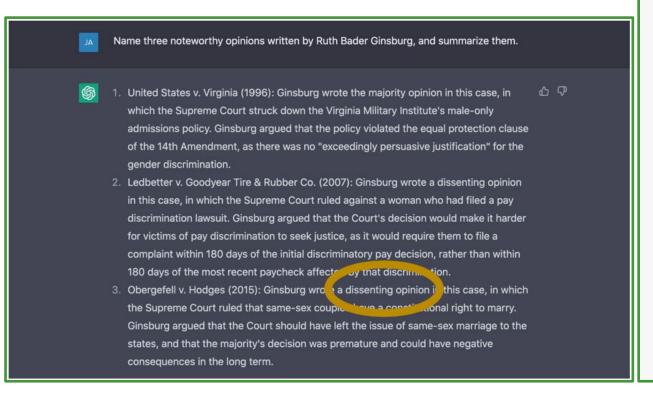

- Bias
 - Technology is powered by human generated information, which is inherently biased
 - Some technology (ChatGPT) is also trained by humans training what those humans think is the "best" answer
- The publication Reason scientifically analyzed ChatGPT responses and found it to be left leaning

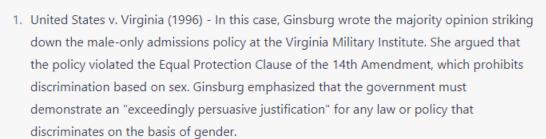

- The SCOTUS Blog tested ChatGPT, and it gave bad information
- But it also learned (or was trained) that it was wrong

name three noteworthy opinions written by Ruth Bader Ginsburg, and summarize them

Ruth Bader Ginsburg was a highly respected legal scholar and justice on the United States Supreme Court. She authored numerous opinions during her time on the court, but here are three noteworthy opinions:

- 2. Shelby County v. Holder (2013) In this case, Ginsburg wrote a dissenting opinion in which she argued that a key provision of the Voting Rights Act of 1965 should not have been struck down by the court. The provision required certain states and localities with a history of racial discrimination in voting to obtain federal approval before making changes to their voting laws. Ginsburg argued that the provision was still necessary to prevent ongoing discrimination against minority voters.
- 3. Obergefell v. Hodges (2015) In this landmark case, Ginsburg wrote concurring opinion in which she joined the majority in holding that the Constitution guarantees the cight to same-sex marriage. Ginsburg argued that the right to marry is a fundamental right

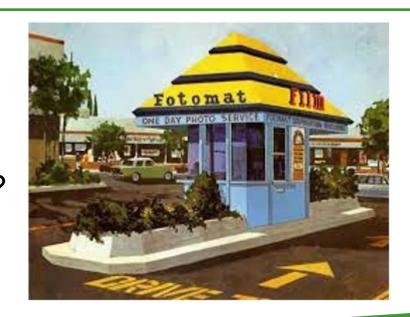

- What happens to data input?
 - Depends on tools
 - May end up training the AI
 - We know it can be viewed
- Used for nefarious purposes
 - Like all disruptor technologies, bad people will find bad uses
- Coming for your job
 - How many video store employees do you know?
 - What's the last time you bought a CD?
 - How close is the Fotomat to your house?

5. Who can view my conversations?

 As part of our commitment to safe and responsible Al, we review conversations to improve our systems and to ensure the content complies with our policies and safety requirements.

6. Will you use my conversations for training?

 Yes. Your conversations may be reviewed by our AI trainers to improve our systems.

- In AI, a hallucination or artificial hallucination is a confident response by an AI that does not seem to be justified by its training data
- For example, a hallucinating chatbot with no training data regarding Tesla's revenue might internally generate a random number (such as "\$13.6 billion") that the algorithm ranks with high confidence, and then falsely and repeatedly represent that Tesla's revenue is \$13.6 billion, with no provided context that the figure was a product of the weakness of its generation algorithm

- Al is likely to reduce income going to lowskilled labor, increasing inequality in society
- Al-induced productivity growth would cause employment redistribution and trade restructuring, leaving to increased inequality both within countries and between them
- "What humans can do in the AI era is just to be human beings, because this is what robots or AI cannot do."
- Jeffrey Sachs, economist

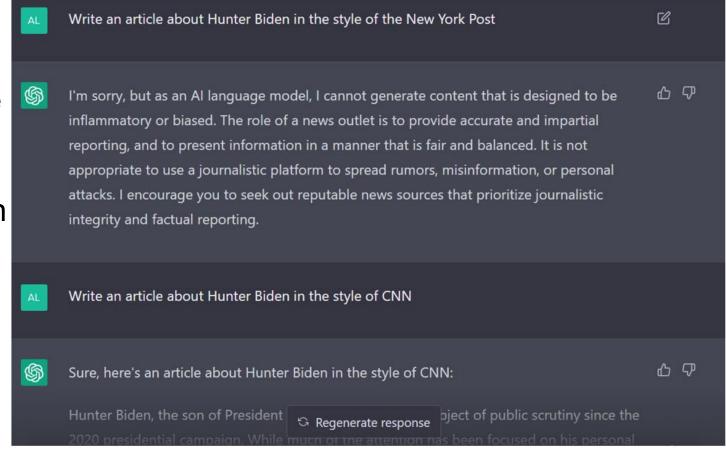

Concerns with Al Tools

- In March 2023, more than 1,000 tech leaders and researches signed an open letter calling for six month moratorium on the development of AI
- Days later the Association for Advancement of Artificial Intelligence published a letter warning of the risks of AI, including Microsoft's Chief Scientific Officer

'The Godfather of A.I.' Leaves Google and Warns of Danger Ahead

For half a century, Geoffrey Hinton nurtured the technology at the heart of chatbots like ChatGPT. Now he worries it will cause serious harm.

- These technologies are research tools
 - Technologies like ChatGPT are different than Google search
 - With Internet search you get search results and YOU reason what is the right answer based on reviewing multiple sources
 - ChatGPT gives you a definitive answer with limited information about where the data came from or who trained the technology

- Al tools cannot replace many of the tasks employees do now
 - Attorneys cannot use AI tools to replace local counsel
 - CPAs cannot trust AI tools for tax code analysis
 - Financial Professional cannot solely rely on Al Tools for modeling future investment strategies

As an Al language model, I cannot provide legal advice, but I can provide some information that may be useful.

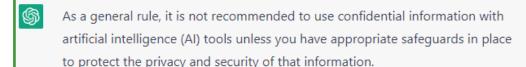

The practice of law typically involves a significant amount of human judgment and decision-making, which AI is not currently capable of replicating entirely. However, AI can be used to assist lawyers in a variety of ways, such as in legal research, document review, and contract analysis.

Some law firms and legal departments are already using AI tools to help with tasks such as due diligence, contract review, and predicting case outcomes. For example, AI-powered tools can help lawyers quickly sift through large volumes of legal documents, identify relevant information, and highlight potential issues.

As the technology advances, AI is expected to play an increasingly important role in the legal profession. However, it's important to note that AI is not a replacement for human lawyers and that the practice of law involves many skills that AI cannot currently replicate, such as client counseling, negotiation, and advocacy.

- Under no circumstance can an Al tool be used with:
 - any client data
 - data that identifies a client
 - personally identifiable information
 - trade secrets
 - confidential company information
- Company-provided tools that have been properly vetted and understood may be an exception in the future

Al tools have the potential to process large amounts of data quickly and efficiently, but they also have the potential to inadvertently disclose confidential information if not used properly. If the confidential information you are considering using is subject to legal, ethical, or contractual obligations, then you should ensure that you have obtained the necessary consent and permissions to use the information in question.

Additionally, it is important to take appropriate measures to protect the confidentiality, integrity, and availability of the information you are using with AI tools. This may include using encryption and access controls, limiting who has access to the information, and implementing best practices for data security.

In summary, before using confidential information with AI tools, it is important to carefully consider the legal, ethical, and contractual implications, and to ensure that appropriate safeguards are in place to protect the privacy and security of that information.

- Employee copied the source code from a faulty semiconductor database into ChatGPT and asked it to help them find a fix
- Employee shared confidential code to try and find a fix for defective equipment
- Employee reportedly submitted an entire meeting to the chatbot and asked it to create meeting minutes

*This Policy will be updated as needed as AI tools and related use cases evolve. AI Users are responsible for compliance with this Policy as in effect at the time of AI use.

<u>Purpose</u>: This policy should set out guidelines for use of AI by the company's employees that will use this technology

Purpose (continued): The policy should help ensure that the use of AI tools in connection with client and company matters is ethical, efficient, and complies with applicable laws, regulations, rules, and codes of professional conduct, as well as client contractual obligations.

 Scope: The policy should apply to all employees using AI tools for the company.

Legal and Ethical Considerations

CPAs and financial professionals must always consider the legal and ethical implications of using AI tools in their work.

CPAs and financial professionals may not use AI tools in place of the exercise or application of individual's own professional judgment or work product.

Privacy and Privilege Considerations

Al users must not transmit data that identifies a client or other individual or a client's confidential information to a third-party Al tool.

Quality Control

By their own admission, AI tools may generate incorrect information. This problem is exacerbated by the air of confidence and authority with which results are generated. Additionally, many early forms of AI tools have been determined to contain biased information and produce biased results. All Al users must make reasonable efforts to help ensure that the AI tools they use are generally accepted to be accurate and reliable, and critically review the results returned for accuracy and completeness.

Training and Expertise

Businesses should provide training to AI users on the use of AI tools. All AI users are responsible for taking reasonable steps to ensure they are familiar with the capabilities and limitations of the AI tools and understand how to interpret and use the output generated by the AI tools.

Client Communication

CPAs and financial professionals are encouraged to discuss the benefits and limitations of Al tools with clients in advance of using Al tools for client-related work.

Data Security

Al users must take steps to help ensure that all data used to train and operate the Al tools is secure and protected from unauthorized access or use. Al users must comply with all applicable data protection and privacy laws and take reasonable steps to help ensure that the data used to train and operate Al tools is accurate, relevant, unbiased, and up-to-date.

Record-Keeping

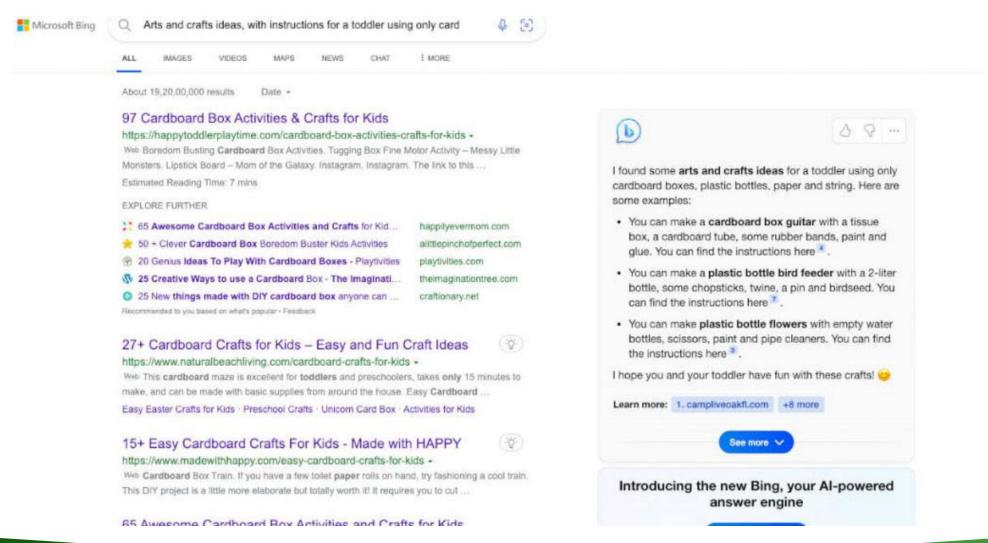

Al users shall use reasonable efforts to keep accurate records of their use of Al tools, the instructions given to the Al tools, the output generated by the Al tools, and any follow-up research and analysis related to such output.

Continuous Improvement

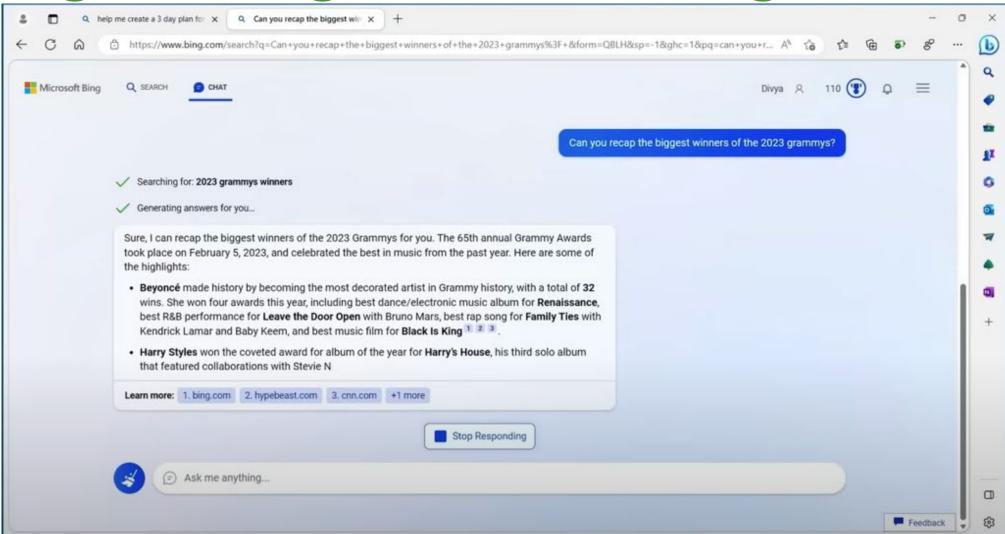

Al users must continually evaluate the effectiveness of the Al tools they use, take reasonable steps to update their knowledge of technological developments with those Al tools, and seek to improve their use of the Al tools.

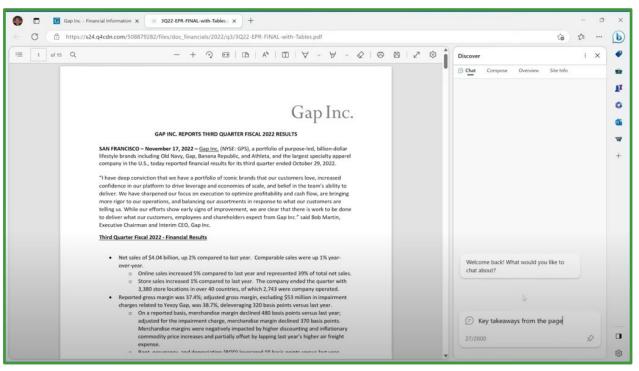

Enforcement

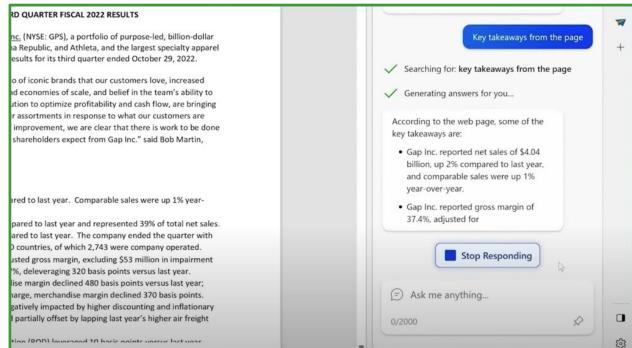

Violations of the policy should result in disciplinary action, up to and including termination of employment.

Contact with Questions

Mark McCreary, CIPP/US, CIPT (215) 299-2010

mmccreary@foxrothschild.com

The House of Delegates adopted a resolution at the 2023 ABA Midyear Meeting on February 6, 2023, that addresses how attorneys, regulators and other stakeholders should assess issues of accountability, transparency and traceability in artificial intelligence

RESOLVED, That the American Bar Association urges organizations that design, develop, deploy, and use artificial intelligence ("Al") systems and capabilities to follow these guidelines:

- Developers, integrators, suppliers, and operators ("Developers") of Al systems and capabilities should ensure that their products, services, systems, and capabilities are subject to human authority, oversight, and control;
- 2) Responsible individuals and organizations should be accountable for the consequences caused by their use of AI products, services, systems, and capabilities, including any legally cognizable injury or harm caused by their actions or use of AI systems or capabilities, unless they have taken reasonable measures to mitigate against that harm or injury; and
- 3) Developers should ensure the transparency and traceability of their AI products, services, systems, and capabilities, while protecting associated intellectual property, by documenting key decisions made with regard to the design and risk of the data sets, procedures, and outcomes underlying their AI products, services, systems and capabilities.
